

SeedMint

○ positions used for numbers

○ positions used for letters

recommended tools:

screwdriver flat, hammer 500-1000g

1. Insert washer into Slider and push into place
3. use the two small rods sticking out of the top of the SeedMint to turn the guiding part into desired position, until it snaps in.
4. hit the letter or number punches inserted into the desired gap in the guide using a hammer.
5. repeat steps 3 and 4 until one washer is complete

Note: after punching the first number the washer gets jammed in place slightly to avoid movement. Use a screwdriver to easily lever the washer out when done.
